

HP5V SERIES

Swash-plate Type Axial Piston Variable Displacement Pump

HP5V series piston pump is high pressure open circuit axial piston pump specially designed with a new structure, and has lighter weight, higher power density, and longer life compared with HP3V pump.

Apply to open hydraulic circuit

Features

- Variable pump in swash-plate design for open circuit.
- High continuous pressure.
- Exceptional self-priming capability.
- Available with American (SAE) and Japanese (JIS) mounting flanges and shafts.
- Excellent reliability and long life.
- High power to weight ratio.
- Variety of control options.
- Optional through drive.
- Quick control response.
- Low pressure pulsation and low noise.
- Developed for engineering, mobile vehicles, industrial and other industrial application.

Regulators introduction

Code: L1(DR)

Control Type :

- 1. Load sensing**
Standard setting: 15bar
Adjustment range: 10bar-21bar
- 2. Pressure Cut-off**
Standard setting: 320bar
Adjustment range: 21bar-320bar

Function and Features: Load sensing + Pressure Cut-off

The load sensing control is a flow control option that operates as a function of the load pressure to regulate the pump displacement to match the actuator flow requirement. The load sensing control compares pressure before and after the sensing orifice and maintains the pressure drop across the orifice (differential pressure Δp) and with it the pump flow constant.

If the differential pressure Δp increases, then the pump displacement decreases, and if the differential pressure Δp decreases, then the pump displacement increases until the pressure drop across the sensing orifice in the valve is restored.

$$\Delta p = P_p - P_l$$

Pump displacement is controlled to match the flow requirement as a function of the system differential pressure (load pressure vs delivery pressure). In addition, there is a pressure cut off function incorporated into the control.

The pressure cut off control keeps the pressure in a hydraulic system constant within its control range even under varying flow conditions, the variable pump only moves as much hydraulic fluid as is required by the actuators. If the operating pressure exceeds the set point set at the pressure control valve, the pump displacement is automatically swivelled back until the pressure deviation is corrected.

"DR" control is on the basis of "L1" control, tighten the load sensitive valve adjust screw, and the load sensitive valve doesn't work.

Hydraulic Circuit:

Regulators introduction

Code: P0

Control Type :

- 1. Load sensing**
Standard setting:15bar
Adjustment range:10bar-21bar
- 2. Pressure Cut-off**
Standard setting:320bar
Adjustment range:21bar-320bar

Function and Features: P0 Pressure cut-off

The Pressure Cut-off regulator monitors outlet pressure once the pressure reaches the cut-off setting, the pump will return to minimum displacement.

Remote Control

The pump can be remotely controlled by connecting a relief valve to the PL port of the regulator. The pump can also unload at a low pressure continue standby condition by using a solenoid valve.

Hydraulic Circuit:

HPSV

Regulators introduction

Code: □ /1

Control Type :

- 1. Load sensing**
Standard setting: 15bar
Adjustment range: 10bar-21bar
- 2. Pressure Cut-off**
Standard setting: 320 bar
Adjustment range: 21 bar-320 bar
- 3. Torque limiting**

Function and Features: _/1 Load Sense and Pressure Cut-off with Torque limiting

The L1 control functions as previously noted. In response to a rise in delivery pressure the swash plate angle is decreased, restricting the input torque. This regulator prevents excessive load against the prime mover.

The torque limit control module is comprised of two springs that oppose the spool force by the system pressure. By turning an outer and inner spring adjustment screw, the appropriate input torque limit can be set.

Hydraulic Circuit:

Regulators introduction

Code:

□ /1-E0

Control Type :

- 1. Load sensing**
Standard setting:15bar
Adjustment range:10bar-21bar
- 2. Pressure Cut-off**
Standard setting: 320bar
Adjustment range: 21bar-320bar
- 3. Port Pr pressure:** 20bar~45bar
- 4. Electromagnet characters**

Voltage(V)	Current(A)	Resistance(Ω)	Insulation grade
12	0.80	7.3±10%(20°C)	H(180°C)
24	0.75	21.2±10%	UP to IP6K6/IPX9K

5. Connector (deutsch or Amp)
DEUTSCH: DT04-2P-E005
AMP: 174354-2 , 173706-1

Function and Features:

/1-E0 Load Sense and Pressure Cut-off with Torque limiting

The L1 control functions as previously noted. It controls the input torque of the pump by changing different current, specific current is related to certain input torque, thus satisfy needs of different torque on excavator

Hydraulic Circuit:

Regulators introduction

Code: /1-H0

Control Type :

- 1. Load sensing**
Standard setting:15bar
Adjustment range:10bar-21bar
- 2. Pressure Cut-off**
Standard setting: 320bar
Adjustment range: 21bar-320bar
- 3. Port Pr pressure: 0bar~39bar**

Function and Features: /1-H0 Load Sense and Pressure Cut-off with Total torque limiting

The L1 control functions as previously noted. It controls the input torque of the pump by changing different input pressure of port Pr, specific current is related to certain input torque, thus satisfy needs of different torque on excavator.

Hydraulic Circuit:

Regulators introduction

Code: LP1

- Control Type:**
1. Load sensing
Standard setting: 17bar
Adjustment range:13bar~17bar
 2. Torque limiting

Function and Features: /1 Load Sense and Pressure Cut-off with Torque limiting

The L1 control functions as previously noted. In response to a rise in delivery pressure the swash plate angle is decreased, restricting the input torque. This regulator prevents excessive load against the prime mover.

The torque limit control module is comprised of two springs that oppose the spool force by the system pressure. By turning an outer and inner spring adjustment screw, the appropriate input torque limit can be set.

Hydraulic Circuit:

HPSV

Regulators introduction

Code: ER2

Control Type : Electro-hydraulic pressure control

The ER2 valve is set to a certain pressure by a specified variable solenoid current.

This causes an increase or decrease in the pump swivel angle (flow) in order to maintain the electrically set pressure level. The pump thus only delivers as much hydraulic fluid as the consumers can take. The desired pressure level can be set steplessly by varying the solenoid current.

As the solenoid current signal drops towards zero, the pressure will be limited to P_{max} by an adjustable hydraulic pressure cut-off to secure fail safe function

Static current-pressure characteristic curve ER2

(negative characteristic curve measured with pump in zero stroke)

- Hysteresis static < 3 bar

Circuit diagram:

Flow-pressure characteristic curve

- Characteristic curves valid for $n_1 = 1500 \text{ rpm}$ and $t_{\text{fluid}} = 50^\circ \text{C}$.

Technical data, solenoid		
Voltage		24 V ($\pm 20\%$)
Control current	Start of control at p_{max}	50 mA
	End of control at p_{min}	600 mA
Limiting current		0.77 A
Nominal resistance (at 20°C)		22.7 Ω
Dither frequency		100 ~ 200 Hz
Actuated time		100%
Operating temperature range at valve		-20°C to $+115^\circ \text{C}$
